WEATHER OF CONCERN

Weather of Concern

- An approaching low pressure system will bring moderate to heavy precipitation and mountain snow to Northern California.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

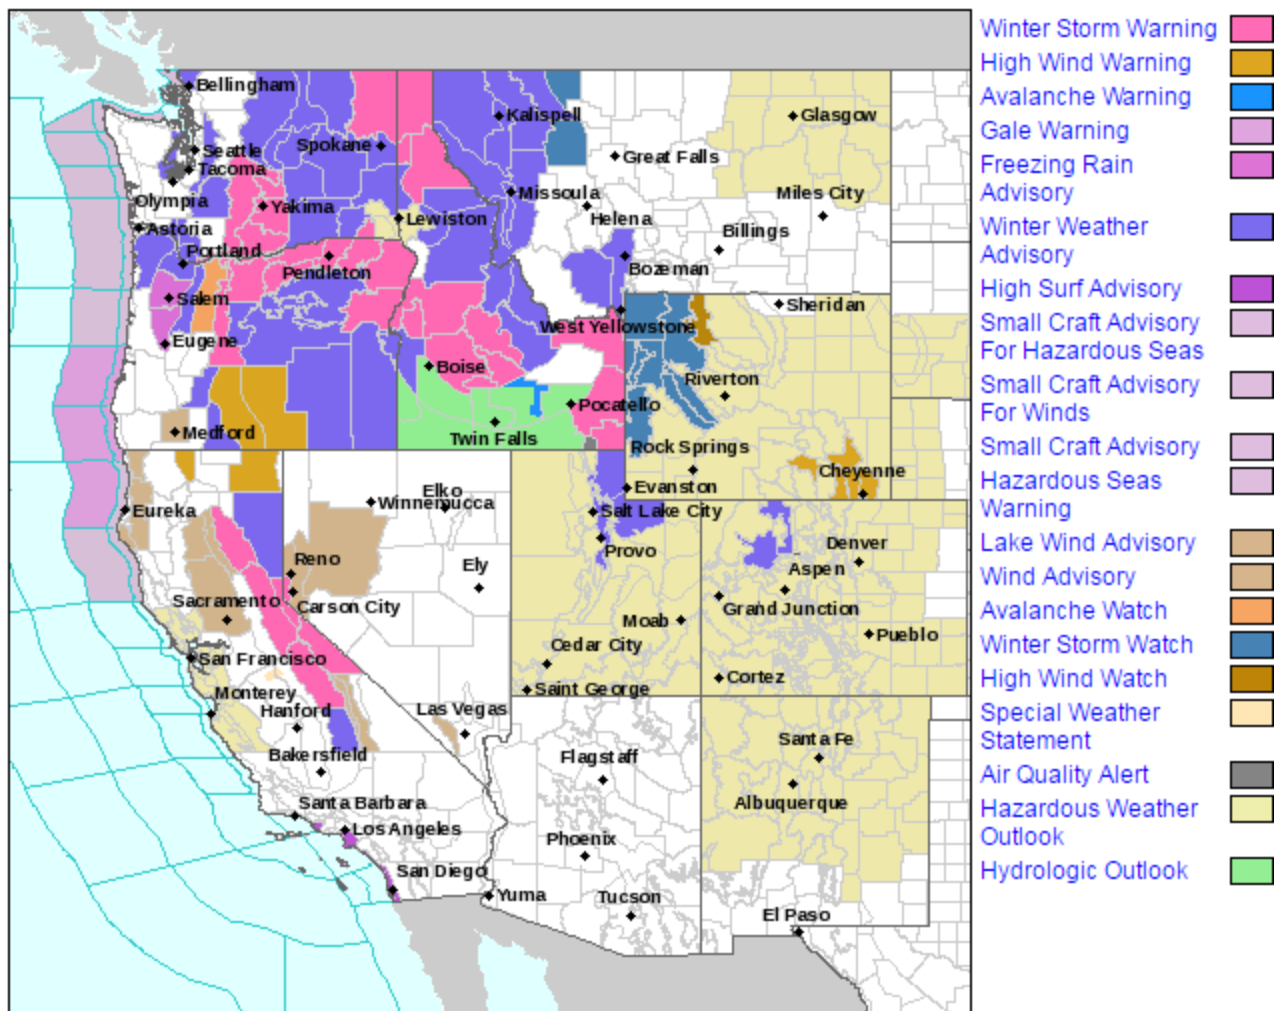

NORTHERN CALIFORNIA

Low pressure off the Oregon coast will continue to produce wet windy conditions across the region through early Saturday. Southeast to Southwest gusts will reach 40-50 mph in open areas today, and some of the most wind-prone areas may see gusts over 60 mph. Snow levels are 5000 feet in the far north and 6000 feet at the south end of the region. The heaviest precipitation through early Saturday will be over the higher terrain west of the Cascade-Sierra crest. By midday Saturday the precipitation will change over to numerous showers in the mountains and isolated to scattered showers in valleys, with more breaks in the clouds, and showers will further decrease on Sunday. The next Pacific storm system will reach the coast Sunday night or early Monday with moderate to heavy precipitation and gusty Southeast to Southwest winds. Snow levels will start out above 5000 feet, but drop to 3000 feet in the north and 5000 feet in the south once the cold front moves through midday Monday. After a break late Monday and early Tuesday, a much warmer system will arrive late Tuesday with more wet windy weather and snow levels above 6000 feet. At that point, a pattern where a Pacific storm system moves in every 2-3 days can be expected through mid February, continuing the wet unsettled and occasionally windy conditions.

SOUTHERN CALIFORNIA

A Pacific storm currently off the Oregon Coast will bring showers away from the lower and eastern deserts through this evening. Most foothill and mountain locations of Central California will receive an additional half inch to 2 inches of rainfall, while the coastal and valley locations of Central California receive between a quarter inch and a half inch of additional rainfall. Most locations across Southern California will see less than a quarter inch of additional rainfall with this storm. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes through tonight. A weak ridge of high pressure will bring dry conditions and light winds to the region this weekend. Another Pacific storm will bring showers back to Central California Sunday evening and to Southern California Monday morning. Showers with this storm will continue through Tuesday evening. This second storm looks as though it will bring more rainfall to the region than the first storm, especially across Southern California. South to west winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert locations Sunday evening through Tuesday night. The snow level with both storms will be between 7,000 and 8,000 feet. Temperatures will remain near normal through early next week, with mid 40s to mid 50s across the mountains and upper 50s and 60s in the valleys. A ridge of high pressure will build into the region from the Pacific bringing a warming and drying trend Wednesday and Thursday.
